The frequency charts shows the number of times a particular answer was selected.

Norm Across Subject

These charts shows a comparison of your score against the average score of all instructors who is teaching the subject.

Comments About Kang Tse-Lin Keegan

Comments
Prof Keegan fully understands the topics that he teaches and is able to demonstrate the applications in a way that students could understand.
Prof Keegan is very nice and patient in addressing all the questions we have. He is also able to effectively teach in class, using methods of drawing and writing on the board to help us visualise the thought process and the concepts involved. He makes the content easier to understand, remember and to use.
– The prof usually asks is everyone ok with this before moving to the next topic to make sure every student understands the concept
Prof Keegan is very patient and will take time to ensure we fully understand concepts. Also, I really appreciate how he is able to break down touch concepts on the whiteboard, and his concept recaps at the beginning of each class
–
use the mic instead of trying to project voice to entire classroom?
NIL
Very smart and quick to catch on our misconceptions.
Super passionate about the subject and very patient and creative when teaching students :) thank Prof really appreciate it!!
He is very patient which I really appreciate. He sincerely tries to understand what the student does not grasp and explains it in bite-sized bits that are easier to understand. I think he is a very good prof because he is bright and humble which is inspiring. His passion for mathematics is obvious to his students as well.
he is very enthusiastic about math and knows his things very well. i like how he always provide a overall view of concepts before the start of every lesson it is really helpful to me. i would appreciate more if more time is given for us to attempt the cohort lesson. (or more tips is given before letting us attempt because normally the weaker student like me will not have any idea how to start and time is wasted there)
I like that he goes through a recap of previous cohort concepts and at the same time shows students how they are inter-linked. Additionally, his explanations are clear and I can understand concepts better through his guidance.
–
you can try explaining concepts in simpler terms, I am not able to catch up with lessons most of the time
The way he breaks down the concept and summarise it is the best.
